SUMMARY

EXISTING COMMUNITY PLATFORM – CRITICAL FIX & ENHANCEMENT PROMPT: detailed implementation requirements for auditing and fixing authentication, Karta/family registration, member profile management, permissions, workflows, migrations, and testing in an existing Indian community platform.

SOURCE CONTENT TYPE

The provided content is a technical implementation prompt/specification, not a personal resume.

REQUESTED STARTING DELIVERABLE

Begin with Current Architecture Audit and Root Cause Analysis before major changes.

CORE PROBLEM STATEMENTS

1) Authentication is not working correctly. 2) User must be able to register as Karta/Family Head of a new family and add family members. 3) Every user/member must maintain a complete personal profile including demographic, educational, physical, address, and photo information.

PRIMARY REQUIREMENTS

Audit frontend/backend/database; fix authentication and session management; enforce protected routes and server-side authorization; implement role resolution; support registration flows for joining existing family or registering new family as Karta; implement comprehensive member profile sections; address/photo privacy controls; approval workflows; duplicate prevention; user-member-family architecture integrity; migration strategy; acceptance tests; preserve existing modules.
